Schlüter®- DITRA-DRAIN 4

Schlüter-DITRA-DRAIN 4 consists of a closed polyethylene foil that features approx. 4 mm high, truncated conical studs covered with a laminated filter webbing. Further studs are shaped as approximately 2 mm high inverted truncated pyramids, and form square undercuc chambers on the underside. These facilitate the bonding of the cementitious tile adhesive, which is applied with a notched 6 mm x 6 mm trowel, to DITRA-DRAIN 4 and the substrate. It is important that DITRA-DRAIN 4 is fully embedded in the adhesive.

Schlüter-DITRA-DRAIN 4 is particularly suited for interior areas and small exterior areas.

- BBA Certified

 Increased energy-efficiency

 Water repellent & soundproof

Using Insulation Boards with floor heating significantly reduces heat-up times and running costs.

Many people wonder if it is worth insulating under floorboards and the answer is that yes, it definitely is. Backerboards are ideal for use with electric underfloor heating as they prevent the heat from the heating system escaping downwards to the subfloor. Our Backerboards do not let the heat pass through from the heater to the subfloor. Therefore the heat gets pushed upwards, onto the floor surface where you want the heat to go.

Insulation boards always improve the efficiency of your underfloor heating system by allowing a quicker heat up time, when no heat is getting wasted by going downwards away from the floor surface.

FOR BACKER-BOARDS, SEE PAGE 8

The Wi-Fi thermostat is included in the kit and a dedicated app is available for full control of the electrical heating of floor and wall coverings.
